Biomarkers useful for predicting to a cancer treatment comprising dependent kinase activity. or determining administration of a modulator f a mammal of cyclin-

Claim 5; SEQ ID NO 1424; 141pp; English

This invention describes a novel method of predicting or determining whether a mammal will respond or is responding to an anti-cancer agent that modulates cyclin-dependent kinase (cdk) activity. The method comprises measuring the level of one or more biomarkers selected from 2774 biomarkers given in the specification (nucleotide sequence SEQ ID NO:1246 (Genbank EST W28729) is especially preferred). The method of the invention is utilized in a kit for determining or predicting whether patient would be susceptible or resistant to treatment by an agent modulating cdk activity. The invention also describes a method for utilizing individualized genetic profiles for treating diseases and disorders based on patient's response and molecular level, specialized microarrays comprising the biomarkers described, antibodies directed

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  against the biomarkers and a cell culture model to identify biomarkers. The cdk modulator is preferably N-5-[[5-(1,-Dimethylethyl)-2-cxazolyl]methyllthiol-2-thiazolyl-4-piperidine carboxamide, 0.5-L-tartaric acid salt. Note: The sequence data for this patent did not for part of the printed specification, but was obtained in electronic formal directly from WIPO at ftp. wipo.int/pub/published pot sequences. This sequence represents a biomarker used in the method of the invention.
Identifying compound that changes amyloid beta precursor protein processing in cell, involves exposing cell to compound, comparing activity level of polypeptide before and after exposing cell to compound the compound of th
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             neuroprotective; nootropic; gene therapy; substrate inhibition; gene expression; diagnosis; Alzheimers disease; neuroprotective; nootropic; degeneration; neurological disease; cognitive disorder;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Sequence 351
                                                                                                                                                                                                                                                                                                                                                                                      10-SEP-2003; 2003WO-EP010160.

CC changes the amyloid-beta precursor processing in a cell,
CC involving providing a host cell expressing a polypeptide having one of 14
CC amino acid sequences (SEQ ID No. 15-28), determining activity level of
CC polypeptide, exposing the host cell to a compound, determining activity
CC level of the polypeptide, and identifying the compound, by which the
CC second activity level is less than the first activity level. Also
CC described are: changing the amyloid-beta precursor protein processing of
CC or cell; a polynucleotide (I) comprising a nucleotide sequence chosen from
CC one of 310 fully defined 21 base pair sequences (SEQ ID No. 29-338) given
CC in the specification; a vector (II) comprising (I); and diagnosing a
CC pathological condition involving cognitive impairment or a susceptibility
CC to the condition in a subject. (MI) is useful for identifying a compound
CC to the condition in a subject. (MI) is useful for identifying a compound
CC or (II) is useful as a medicament or for producing medicament for
CC impairment. This is the amino acid sequence of human receptor FPRL1
CC impairment. This is the amino acid sequence of human receptor FPRL1
CC inhibition of amyloid beta production. Note: The invention claims SEQ ID
CC NO's 1-28 which are not shown in the specification.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        and

CC relates to the use of the FPRLI as a tool to identify compounds affective (C compounds as therapeutics.) A method of screening for a compound able to (C compounds as therapeutics.) A method of screening for a compound able to (C contracting a recombinant cell with a test compound, where the recombinant (C coll comprises a recombinant nucleic acid expressing FPRLI (provided the CC call does not have endogenous FPRLI expression); and (b) determining the C call does not have endogenous FPRLI expression; and (b) determining the C call tool of the test compound to affect one or more activities of FPRLI. A CC compound that activates a FPRLI receptor subtype is used in a claimed (C amputation, cancer, bacterial infection, irritable bowl syndrome, CC amputation, cancer, bacterial infection, physical inflammation of physical trauma and radiation exposure, vasoconstriction as a result of respiratory distress syndrome, (Crohn's disease, endotoxin shock, renal disease, benign prostatic hypertrophy, myocardial ischemia, (C glomerular disease, benign prostatic hypertrophy, myocardial ischemia, (C renal disease, cardiovascular disease and hypertension or chemical injury (all claimed). Also claimed are: cells that express FPRLI receptor, which are used in a claimed method of identifying agonists of FPRLI, a method (C is associated with rheumatoid arthritis, Alzheimer's disease or asthma, (C resultes from physical inflammation, where the inflammatory response results from CC sacutive coxygen species to evoke vascular leakage or edema, (is associated with rheumatoid arthritis, Alzheimer's disease or asthma, (c results from physical inflammation to treat or prevent a cincluding slomerular disease, a cardiovascular disease, including slomerular disease, a cardiovascular disease including corrective response or condition such as renal hemodynamic disease, including alomerular disease, a cardiovascular disease including the provided the condition such as suffidopeptide condition and a method of inducing vasodilation to treat or p
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       glomerular disease; cardiovascular disease; hypertension; hypotensive; myocardial infarction; cardiant; myocardial ischemia; vasotropic; allergy; antiallergic; immune disease; shock; gout; antigout; musculoskeletal disease; psoriasis; antipsoriatic; dermatological disease; psoriasis; antipsoriatic; respiratory distress syndrome; respiratory-gen; respiratory disease; crohns disease; gastrointestinal-gen; gastrointestinal disease; crohns disease; gastrointestinal-gen; gastrointestinal disease; benign prostatic hypertrophy; neoplasm; inflammatory bowel disease; benign prostatic hypertrophy; neoplasm; inflammatory bowel disease; brain injury; cerebroprotective; systemic lupus erythematosus; brain injury; vasoconstriction; pain; analgesic; diabetes; antidiabetic, bartorial inforticit.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present sequence is the protein sequence of human formyl peptide receptor-like 1 (FPRLI), also known as lipoxin A4 receptor. The invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Nash N,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      07-NOV-2003; 2003US-0518476P.

related to aberrant G-protein coupled signalling, particularly N-formyl peptide receptor dependent signalling; a disorder related to aberrant G-protein coupled receptor dependent phosphatidylinositol-calcium signalling; a disorder related to aberrant G-protein couple receptor dependent phosphatidylinositol or calcium second messenger activation; an immune disorder an inflammatory disorder; a developmental disorder; a disorder that would benefit from inhibition of a leukotriene B4-dependent proinflammatory signal, aberrant N-formyl peptide signalling; aberrant neutrophil activation; a disorder associated with byper neutrophil activation; a disorder associated with below normal neutrophil activation; a disorder associated with below normal neutrophilater activation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to an isolated nucleic acid encoding a human G-
protein coupled receptor HGPRBMY39 (or its fragment domain or epitope),
its complement or a polynucleotide capable of hybridising under stringent
conditions to it. Also included are a HGPRBMY39 recombinant vector, a
recombinant host cell comprising the vector sequences (used to express
and make the protein), an isolated HGPRBMY39 polypeptide, and an anti-
HGPRBMY39 antibody. The HGPRBMY39 polynucleotides and polypeptide is
useful for preventing, treating or ameliorating e.g. a (male)
reproductive disorder; a testicular disorder or cancer; a disorder
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      oxidation states; a disorder related to aberrant superoxide generation; leukaemia; a bone marrow disorder; cancer; proliferative disorders; neural disorders a disorder related to aberrant neutrophil chemotaxis; Alzheimer's disease; prion disorders; and a bone metabolism disorder.                                    The present sequence is provided in a specification relating to a method for screening for disease inhibiting genes and peptides. Nucleic acids originating in cells from patients suffering from the disease are introduced into a host cell and expressed in that cell, the effect on cell death is determined, and nucleic acids are selected in which a depressant effect on cell death is observed. The method is useful in the identification of drugs for treatment and gene therapy of cell-death
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Human; disease inhibiting gene; gene screening; protein s drug identification; gene therapy; cell-death associated central nervous system disorder; Alzheimer's disease; Huntington's disease; cerebrospinal ataxia; apoptosis; familial amyotrophic lateral sclerosis; HN.
                                                                                                                                                                                                                                                                                                                                                                                                                     Screening for disease inhibiting genes and peptides nervous system diseases involving cell death.

The present invention relates to protective sequence proteins (ABB44624-ABB44330) and their coding sequences (ABA82701-ABA82937). The sequences, when introduced into a cell either predisposed to undergo cell death or in the process of undergoing cell death, prevent, delay or rescue the cell from death, hence, these sequences are named "protective sequences".
                           The sequences are useful for treating and/or ameliorating cancer, autoimmune diseases and neurological disorders e.g. stroke. Furth examples of diseases which may be treated by the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                      New protective sequences and their products, useful for diagnosing and treating diseases involving cell death, including neurological disorders e.g. stroke and for identifying modulators of expression of the

The treatable disorders are preferably of the central nervous system of humans including ischaemia-related conditions such as stroke, cerebral herniation, septic embolism, cerebral oedema, infections such as machasia, metazoal such as meningitis, protozoal infections such as malaria, metazoal infections such as echinococcosis, vascular diseases such as ischaemic encephalopathy, conditions involving the eye such as macular degeneration, diabetic retinopathy, trauma such as epidural haematoma, tumours such as primary intracranial tumours, degenerative diseases such as Alzheimer's disease and nutritional, environmental and metabolic conditions. Sequences AAU73255-AAU7378 tropresent open reading frames of the human protective sequences of the business of the such as protective sequences aautomatic trauma such as protective sequences aautomatic protections.

The invention relates to isolated protective sequence polypeptides (I) and polynucleotides (II). (II) is useful for transferring a protective sequence into a cell, which delays and/or prevents the cell from undergoing cell death. Protective sequences, their products or antibodies are useful diagnostically, prophylactically, therapeutically or as targets for treatment and diagnosis of conditions, disorders or diseases involving cell death. The protective sequences and their products are useful for preventing or treating disorders of the central nervous system including neurological and psychiatric conditions, cerebral oedema, infections such as meningitis, degenerative diseases such as Alzheimer's and motor neuron disease, demyelinating diseases such as multiple sclerosis, nutritional conditions, disorders of the peripheral nervous system including diabetic neuropathy, disorders which cause cell death in organ systems including blood vessels, heart (ischaemia), blood cells
                                                                                                                                       (autoimmune haemolytic anaemia), respiratory system (asthma), oral cavity, gastrointestinal tract, liver (cirrhosis), pancreatitis, polycystic renal disease, urinary tract, genitalia (congenital anomalies), endometriosis, breast (chronic mastitis), thyroid gland (Hashimoto's thyroiditis), adrenal gland, skin (psoriasis), musculoskeletal system (muscular atrophy), bone marrow or bone (osteoporosis). The compositions promote cell death and are useful for treating and/or ameliorating cancer and autoimmune diseases. The caused by infection which induce cell death. (I) is useful to raise an
                                                        immune response, as a reagent in assays designed to quantitatively determine levels of the protein in biological fluids, as markers for tissues in which the corresponding protein is expressed and to isolate receptors or ligands.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to a method for screening genes involved in aging and/or aging-associated diseases (AAD) or in oxidative stress. The method involves mutating and cultivating a yeast cell, enriching the population for mother cells, labelling the mother cells and isolating the highly labelled cells. The present sequence is human humanin protein, HNI. This sequence is used to illustrate the method of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Screening genes involved in aging and/or aging-associated diseases or in oxidative stress by mutating and cultivating a yeast cell, enriching the population, labeling the mother cells and isolating the highly labeled

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             that modulates the binding of humanin to bax and/or bld. The method is useful for diagnosing and/or treating disorders associated with the humanin-bax or humanin-bid complex, such as Alzheimer's disease, stroke Parkinson's disease, Huntington's disease, trauma, amyotrophic lateral sclerosis, neuron cell death, cancer or inflammatory or autoimmune disorders. The present sequence is human humanin (cytosolic form) peptide. This sequence is used to illustrate the method of the invention
                                                                          New Humanin derivative that protects a neuronal cell from cytotoxicity, useful for treating neurodegenerative disorders (e.g. Alzheimer's disease), comprises a D-amino acid (e.g. D-Serine) or a phosphorylated
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Identifying modulators of apoptosis, in particular binding modulators of humanin to bax or bid, useful for diagnosing and/or treating disorders such as Alzheimer's disease, Parkinson's disease, cancer and inflammatory

                                                                                                           The invention relates to a derivative of humanin (HN) that protects a neuronal cell from cytotoxicity, where the derivative contains at least one D-amino acid or phosphorylated amino acid, or where the derivative has an addition of one or more amino acids having an activity of forming a multimer. The humanin derivatives are useful in protecting neuronal cells from cytotoxicity related to neurodegenerative diseases. The composition and method are useful in treating neurodegenerative diseases. Albeimer's disease. The present sequence represents an activities of the present sequence represents and the present sequence represents an activity of the present sequence and the present sequence activity of the present sequence activity of the present sequence and the present sequence activity of the present sequence 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New Humanin derivative that protects a neuronal cell from cytotoxicity, useful for treating neurodegenerative disorders (e.g. Alzheimer's disease), comprises a D-amino acid (e.g. D-Serine) or a phosphorylated
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           neuronal cell from cytotoxicity, where the derivative contains at least one D-amino acid or phosphorylated amino acid, or where the derivative has an addition of one or more amino acids having an activity of forming a multimer. The humanin derivatives are useful in protecting neuronal cells from cytotoxicity related to neurodegenerative diseases. The composition and method are useful in treating neurodegenerative diseases. The present sequence represents a disease, such as Alzheimer's disease. The present sequence represents a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Nishimoto
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            16-MAY-2003; 2003WO-JP006139

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention relates to a derivative of humanin (HN) that protects a neuronal cell from cytotoxicity, where the derivative contains at least one D-amino acid or phosphorylated amino acid, or where the derivative has an addition of one or more amino acids having an activity of forming a multimer. The humanin derivatives are useful in protecting neuronal cells from cytotoxicity related to neurodegenerative diseases. The composition and method are useful in treating neurodegenerative diseases, such as Alzheimer's disease. The present sequence represents a HN wild-type peptide sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New Humanin derivative that protects a neuronal cell from cytotoxicity, useful for treating neurodegenerative disorders (e.g. Alzheimer's disease), comprises a D-amino acid (e.g. D-Serine) or a phosphorylated

                                                                                                                                                                                                                                                                                                                                                                                                                                           neuronal cell from cytotoxicity, where the derivative contains at least one D-amino acid or phosphorylated amino acid, or where the derivative has an addition of one or more amino acids having an activity of forming a multimer. The humanin derivatives are useful in protecting neuronal cells from cytotoxicity related to neurodegenerative diseases. The composition and method are useful in treating neurodegenerative disorders, such as Alzheimer's disease. The present sequence represents a HN peptide derivative.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New Humanin derivative that protects a neuronal cell from cytotoxicity, useful for treating neurodegenerative disorders (e.g. Alzheimer's disease), comprises a D-amino acid (e.g. D-Serine) or a phosphorylated

disorders, HN peptide

such as Alz derivative.

as Alzheimer's

disease.

present sequence represents

The invention relates to a derivative of humanin (HN) that protects a neuronal cell from cytotoxicity, where the derivative contains at least one p-amino acid or phosphorylated amino acid, or where the derivative has an addition of one or more amino acids having an activity of forming a multimer. The humanin derivatives are useful in protecting neuronal cells from cytotoxicity related to neurodegenerative diseases. The composition and method are useful in treating neurodegenerative

The humanin derivatives are useful in protecting neuronal cells from cytotoxicity related to neurodegenerative diseases. The composition and method are useful in treating neurodegenerative diseases, such as Alzheimer's disease. The present sequence represents a disease, such as Alzheimer's disease. The present sequence represents a

Ba2891

beta-galactosidase (EC 3.2.1.23), 36K chain - Leuconostoc lactis (strain NZ6009)

C;Species: Leuconostoc lactis

C;Date: 19-Mar-1997 #sequence_revision 19-Mar-1997 #text_change 09-Jul-2004

C;Accession: B42891

Induced chemotaxis of mononuclear phagocytes by using FPRL1. Reduced the aggregation and fibrillary formation by suppressing the effect of the angle on mononuclear phagocytes and acts by competitively inhibiting APP on mononuclear phagocytes and acts by competitively inhibiting the access of FPRL1 to APP. Prevents the translocation of BAX from
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               pathway.
